

GDNX QUINTUPLEX FLUID END

Gardner Denver's GDNX is designed to further increase the operational service life of fluid ends used in a hydraulic fracturing application. Backed by Gardner Denver's legacy of product innovation and superior product quality, the GDNX is a combination of our highest performing components including Redline Consumables.

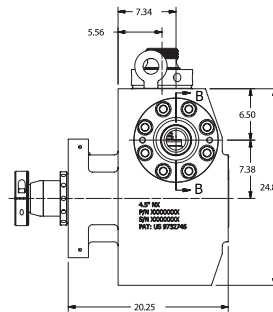

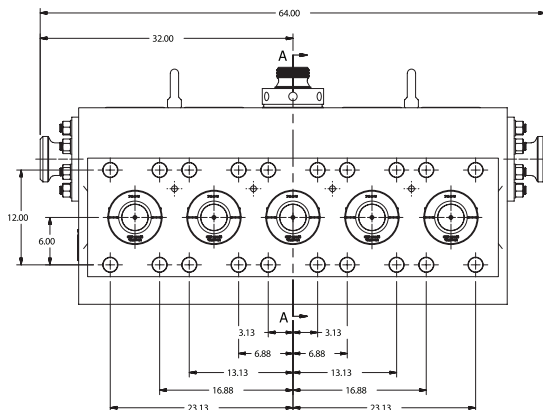

BEST-IN-CLASS FEATURES

- The fit, form and function of the GDNX make it a direct fit to existing 2500Q pumps. Also fits competitors 2500 horsepower pumps.
- GDNX features Falcon Technology, which reduces maintenance time for consumable changes.
- There are no alignment requirements to suction covers and no special tooling required for install, reducing maintenance challenges.
- GDNX's cross-bore design reduces operating stress and maintenance intervals by 3.5x when compared to competitors.
