

Drilling Pump Pistons

High-temp model available

Drilling Expendables Manufactured with Proven Field Technology

Like all of our products, Gardner Denver's pistons are designed to outlast competitor's models. Our new drilling pump products are manufactured around our field-tested and proven line of frac consumables that consistently achieve over a 30% increase in average life span.

Customers said they wanted long-lasting, easy-to-use pistons, and we delivered. From domestically sourced steel, Gardner Denver's pistons feature proprietary bonded inserts and innovative geometry, all of which come together to deliver significantly longer life – all while meeting API Standards, being competitively priced and coming with our "Ready Inventory" promise that we'll have it in stock, when you need it.

Our pistons, along with our new valves and seats, are designed for use in Gardner Denver PZ, F-Series, and National 12P lines of triplex drilling pumps. This gives you options to use these parts across your whole fleet of pumps.
